

Hosted Exchange from Silver Lining

The latest in exchange email technology

Our Hosted Exchange delivers the very latest technologically advanced email platform on the market (Microsoft Exchange 2010). Accessed from our central core, you and your colleagues can see your email wherever you might be, allowing you to respond to the demands of the modern world.

Advanced security

Our Hosted Exchange combines built-in anti-spam and encryption technologies with an advanced anti-virus infrastructure for efficient management of a wide range of security threats.

Efficient Web Application

With a built in Web Application, our Hosted Exchange helps users to be more efficient and productive across platforms and locations, providing them access to email, voicemail, instant messaging and text messages.

Mobile Sync

ActiveSync /Direct Push to mobile devices give users access to a universal inbox with email, voicemail, rights-protected messages and instant message conversations.

Email archiving retention and discovery

Our Hosted Exchange service offers built-in integrated email archiving, retention and discovery capabilities of emails, simplifying the process of preserving business communications.

Information protection and control

Sensitive content in emails can be monitored and the accidental and unauthorised distribution of data controlled using Hosted Exchange tools, including automated alerts about organisational policies and rules that block, redirect, encrypt and modify messages.

Voicemail with Unified Messaging

Benefit from single inbox access to voicemail and email through Hosted Exchange, enabling both systems to be managed from a single platform. Voicemail messages appear as both text and audio for added productivity.

Deployment flexibility

Deployed from within our core cloud environment, Hosted Exchange enables you to crucially save on upfront IT infrastructure costs and helps companies meet regulatory requirements.

The benefits of Hosted Exchange

- Suitable for all businesses small or large
- Freedom to work from anywhere via Outlook Web App, iPhone, BlackBerry, Android and Windows mobile devices
- Lower infrastructure costs – no need to invest in servers, storage, back-up, racks or licensing
- Quickly and easily add and remove users as your business requires
- On demand licensing model, only pay for what you use!
